

Machine Test V2

Guidelines

- Task completion deadline: 1 day (24 hours) from assignment.
- The repository must be set to **private(mandatory)**.
- Once the task is complete, the application must be hosted to ensure accessibility.
- Please note that styling for the create page is optional and not required.
- It should be mobile responsive

Tech stack

Backend	Express or NestJS
Frontend	React or Next.js
Database	MongoDB or PostgreSQL

* Using Prisma is allowed and is considered a plus.

* Using Typescript is allowed and is considered a plus.

Description

Build a full-stack application using the specified tech stack and the Figma design provided below.

Figma design :

<https://www.figma.com/design/AlxzOulGCCmoxZSvKtfsCm/Deepnetsoft-Solutions-Machine-test?node-id=0-1&t=q2fw0emhz8CSdQ2y-1>

- Should be able to create menus (e.g., "Drinks," "Food", "Brunch") directly from the UI, with each menu including:
 - **Menu Name:** The title of the menu (e.g., "Drinks").
 - **Description:** A brief description of the menu's offerings.
- When a menu (e.g., "Drinks") is clicked, it should display the list of items associated with that menu.
- Should be able to create as many menu items , and the application should dynamically adjust to function properly for all created menus and items.

Additional - Will be a plus if you can do this

- Nested Menu (Hierarchy Support) from the UI, with each menu including:
 - A menu can contain **sub-menus** (e.g., "Food" → "Brunch" → "Specials").
 - Nesting should be **dynamic and unlimited in depth**.
 - When a parent menu is clicked, it should display its child menus and items.

Submission

- GitHub Repository
 - Add the following email(s) as collaborators for access:
anoosh.m@deepnetsoft.com ,
sibin@deepnetsoft.com
[,jerin@deepnetsoft.com](mailto:jerin@deepnetsoft.com)
 - Repo > Settings > Collaborators and teams (or Manage access)
> Invite a collaborator > Enter username/email > Add
- After completion, reply to email with:
 - The deployment link to the live application.
 - A link to the GitHub repository containing the code.
 - A database dump file for reference (optional).
- Ensure all files are included, and the application is fully runnable.
